

Daily Routine of an API Developer at Jio Health Hub

Developer: Abhishek Sharma

Morning Routine & Stand-up

- Starts the day by checking **emails, Teams messages, and Azure DevOps (ADO) work items** for urgent updates.
- Attends **daily stand-up meetings (Scrum)** to discuss progress, blockers, and upcoming tasks.
- Collaborates with the team to clarify requirements and prioritize work.
- Collaborate with team to help them in Code Updation and local setup

Task Management

- Reviews assigned **Azure DevOps (ADO) work items** related to API development, bug fixes, or optimizations.
- Breaks down complex tasks into smaller, manageable subtasks.
- Communicates with the **frontend team (React.js devs)** and **backend engineers (FastAPI & Spring Boot devs)** to align on API requirements.

Development & Coding

- Develops and optimizes **RESTful APIs** using **FastAPI (Python)** and **Spring Boot (Java)**.
- Ensures APIs follow best practices for **security, scalability, and performance**.
- Works on **database queries** (SQL or NoSQL) for efficient data fetching and storage.
- Uses **Postman** to test APIs before deployment.
- Implements **JWT-based authentication** and security measures for APIs.
- Writes unit tests using **PyTest (FastAPI)** and **JUnit (Spring Boot)** to maintain code reliability.

Code Reviews & Collaboration

- Submits and reviews **pull requests (PRs) in Azure Repos (Git)**.
- Participates in **code reviews** and suggests improvements.

- Engages in **cross-team discussions** with frontend developers (React.js) to ensure API responses are well-structured.
- Works closely with the **DevOps team** to ensure smooth deployments.

Debugging & Issue Resolution

- Investigates and fixes API-related bugs reported by **Azure Monitor, Application Insights, or Log Analytics**.
- Optimizes API performance by analyzing logs, database queries, and memory usage.
- Troubleshoots integration issues between **Fast API, Spring Boot, and React.js frontend**.

Testing & Deployment (Azure DevOps CI/CD)

- Runs **automated tests (Azure Pipelines)** before merging any code.
- Deploys APIs using **Docker and Kubernetes (AKS - Azure Kubernetes Service)**.
- Monitors API performance post-deployment and ensures smooth user experience.
- Uses **Azure API Management (APIM)** for security, throttling, and analytics.

Learning & Skill Improvement

- Reads **technical blogs or documentation** to stay updated on FastAPI, Spring Boot, and new React.js features.
- Explores **Azure DevOps best practices and cloud technologies** for improving deployments.
- Attends **team knowledge-sharing sessions** or internal tech talks.

End of Day Review

- Updates **Azure DevOps Boards** with task progress.
- Documents API changes or improvements in **Azure Wikis or Confluence**.
- Plans **next-day tasks** for a smooth workflow.
- Logs off after ensuring critical tasks are completed or properly handed off.
