

Backend Developer

Developer- Kunal Kulthe

Team- JioOnePay

Tech Stack: SpringBoot

Developer Responsibilities & Workflow

1. Task Management

- Tasks assigned primarily by the **manager**
- Core responsibilities:
 - **Debugging issues** in the codebase
 - **Writing unit tests** to ensure code quality.

2. Collaboration for Issue Resolution

- Work closely with:
 - **Senior developers**
 - **Product teams**
- Purpose:
 - Clarify requirements
 - Resolve complex technical issues

3. Production Issue Handling

- Handle **only relevant production issues**
- Prioritized if:
 - Issue is related to a feature I worked on
 - Immediate user impact is observed.

4. Code Review Process

- Regularly review teammates' code
- Ensure:
 - Code is clean and follows standards
 - No bugs or issues are missed

5. Scrum Meetings

- Frequency:

Scrum meetings are held to discuss progress, blockers, and upcoming tasks. The frequency of these meetings varies:

- Weekly, Bi-weekly, or sometimes Daily, depending on the project's needs or the sprint cycle.

6. Free Time

- Unassigned Tasks:

During periods where there are no specific tasks assigned or after completing scheduled work, there may be free time. This can be utilized for:

- Learning new technologies
- Exploring improvements in codebase
- Assisting others with tasks
- Refining existing features
