

# Routine of a Developer

**Team:** MyJio Team

## Day-to-Day Tasks:

1. Start the day by checking emails, Jira tickets, and messages. Update the status of tasks while discussing priorities with the team lead.
2. Attend Scrum calls and report:
  - What was worked on yesterday
  - What is planned for today
  - Any blockers preventing progress
3. Review task documentation and plan the implementation accordingly.
4. Discuss requirements and clear any doubts with the Product Manager and Team Leads.
5. Begin development by writing actual code—whether building a new feature, fixing a bug, or refactoring existing logic. Push changes regularly to Git while following coding standards.
6. Run internal tests on the code and analyze results.
7. If tests fail, make necessary fixes and re-run the tests.
8. Once internal tests pass, send the code for peer review. Peers provide feedback, and necessary changes are made based on their suggestions.
9. After peer review, deploy the code to the staging environment. The external QA team runs tests and reports vulnerabilities or flaws in the form of bugs.
10. Fix reported bugs and push the updated build back to the staging environment. This cycle continues until the staging build is bug-free.
11. Once the staging build is approved, push the build to production.
12. Not all of these tasks happen daily, but a developer's day typically consists of a combination of these activities.
13. **Other Passive Tasks:**
  - Learning new technology as per requirement.
  - Reviewing peer work.
  - Creating internal tests using automation tools.
  - Maintaining documentation.
  - Conducting KT (Knowledge Transfer) sessions when required.

## Summary:

A developer's daily routine involves a mix of coding, collaboration, testing, and continuous improvement. From planning and development to debugging and deployment, each task plays a crucial role in delivering high-quality software. Alongside core responsibilities, developers also engage in learning, documentation, and knowledge-sharing to stay updated and efficient in their roles.
