

Inputs in MPC Bi-weekly

MPC Chatbot

Contribution in Bi-weekly:

Sanjeev2.Prajapati(Data Collection, Backend, Model Building & Bot Training)

Models we tried:(17th March-22nd March)

1. TF-IDF (Term Frequency and Inverse document frequency)
2. Cosine Matrix
3. BERT-based sentence transformer
 - sentence-transformers/all-mpnet-base-v2(higher accuracy, larger size)
 - sentence-transformers/paraphrase-MiniLM-L6-v2 (optimized for paraphrase tasks)
 - BAAI/bge-large-en-v1.5 (better for retrieval tasks)

Final Model:(25th March-26th March)

Gen-AI: We've used Gemini API for Retrieving the data from the dataset.

Why Gemini:

- Gemini is free
- Easy to implement
- Don't store the data

Problems we faced:

- Since Chatbot was in Django and the whole project was in React.js and Node.js.
- So, it was difficult for us to integrate two different frameworks together.

Solution:(27th March)

- We converted Django to Node.js for backend.
